## **1. Executive Summary**

Now more than ever due to the current challenging financial climate, it is important for NHS Doncaster CCG to demonstrate that it is making the most effective use of public monies to maximise the health and wellbeing of the people of Doncaster. To achieve this, we need to ensure that our resources are used wisely and we maximise the impact of the services we commission to improve health, reduce health inequalities and ensure our population receives appropriate high quality evidenced clinical care.

We seek to ensure that our commissioning decisions are fully informed and based on the best evidence available and provide best value for money through available benchmarking.

To ensure that our finite resources are consistently directed to the highest priority areas, NHS Doncaster CCG is proposing a commissioning decision making and prioritisation framework that sets out our approach and governance arrangements to ensure as far as possible that our decisions are robust, rational and can be justified to stakeholders and our local population.

This proposed framework should ensure that resources are invested in the highest priority areas and robust processes are in place to identify services which can no longer be prioritised on the basis of clinical evidence, outcomes and value for money. Where approval has been given to reprioritise and realign our commissioning intentions, a clearly defined process will be followed, with clear lines of accountability and responsibility and NHS Doncaster CCG recognises that a number of steps will be required prior to a final decision being taken, including clinical engagement to inform that decision.

## **2. Introduction**

The purpose of this Policy is to establish a system for transparent and coherent prioritisation for the commissioning of health and wellbeing services. It provides a framework for making decisions about relative priorities at a strategic and planning/commissioning level and facilitates rational and reasonable decisions about which services are commissioned in accordance with our agreed strategy.

The proposed framework applies to all commissioning decisions made by NHS Doncaster CCG and should be applied when they can no longer be prioritised on the basis of clinical evidence, outcomes and value for money.

This policy links with our strategic plan and commissioning intentions available at <http://www.doncasterccg.nhs.uk/wp-content/uploads/2016/11/Combined-papers-for-Governing-Body-17th-November-2016.pdf>

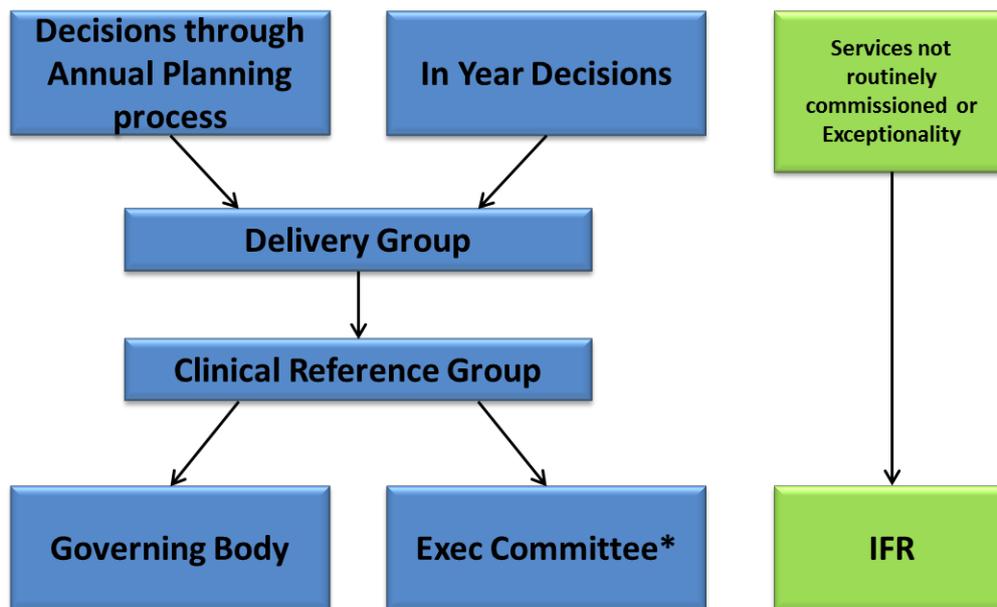

## **3. Decision Making and Prioritisation Approach**

NHS Doncaster CCG is required to make decisions relating to varying situations as outlined below:

- Decisions about strategic and operational priorities for annual resource allocation through business cases for investment and services or value for money reviews and performance monitoring in services or specific treatments where they no longer provide evidenced clinical value, outcomes and best value for money or are a lower priority than services we need to fund within our affordability envelope (including proposal for new Individual Funding Request (IFR) policies)

- Decisions outside of our planning process, decisions on funding outside existing commissioned services and decisions on exceptionality for individual cases. This may apply in the following circumstances where a decision is required:
  - A new intervention is made available that is of significant importance
  - A new treatment or service is made available that provides such significant health or financial benefits
  - A proposal submitted by an external body that provides benefits

**Figure 1 Decision Prioritisation Approach**

\* Under £10m decision made by Chief Officer with advice of Executive Committee members

Informed by:

- Patient Engagement
- Procurement Rules
- Alignment with DCCGs strategic objectives or national mandatory priorities
- Benefits and outcomes are identified and evidenced/measurable
- Compliance with any legal and clinical frameworks or guidance
- Response to a need that has been assessed
- Clinical effectiveness, outcomes including assessment by NICE or other evidence based review
- Impact on health inequalities and protected characteristics
- Will improve patient safety and experience
- Accessibility to service users
- Affordability and value for money

#### **4. Priorities for Annual Resource Allocation**

NHS Doncaster CCG will prioritise existing resources, reconsider commissioned services that are not considered to be delivering the expected health benefit, and consider any new services or business cases to ensure that we are utilising our resources effectively. Local needs and national benchmarking information, where appropriate, will guide NHS Doncaster

CCG in this prioritisation of expenditure at a local level between commissioning programmes. The following criteria will be used for consideration:

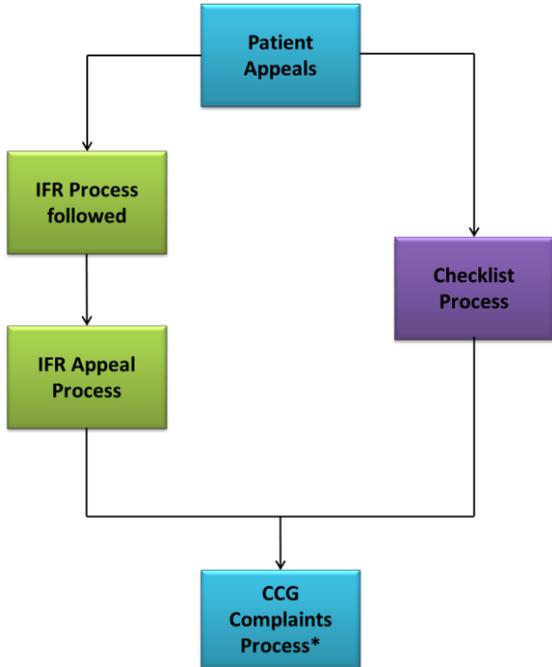

- Alignment with NHS Doncaster CCG's strategic objectives or national mandatory priorities
- Benefits and outcomes are identified and evidenced/measurable
- Compliance with any legal and clinical frameworks or guidance and procurement processes
- Response to a need that has been assessed
- Clinical effectiveness, outcomes including assessment by NICE or other evidence-based review
- Impact on health inequalities and protected characteristics
- Will improve patient safety and experience
- Accessibility to service users
- Affordability and value for money

### 5. Appeals

NHS Doncaster CCG recognises that there may be times when members of the public are dissatisfied with its decisions. We are committed to undertaking engagement and consultation work that, at a minimum meets national expectations of best practice, and believe that doing so will help ensure our decisions are in the interests of the public of Doncaster.

Any patient/carer who feels that a decision is not justified may register a complaint or appeal, as per the below process. Ultimately, the CCG's decisions may be the subject to legal challenge from individuals or groups.

Figure 2- Patient Appeals Process

\*<http://www.doncasterccg.nhs.uk/contact-us/complaints-information/>

## 6. Procedures of Limited Clinical Value and Clinical Thresholds

NHS Doncaster CCG have set a number of clinical criteria as per Appendix 1 and the process for ensuring the clinical criteria are adhered to, is as below.

## 7. Process for operating the schedule

Please see Appendix 1 for the Clinical Thresholds and IFR Panel Referral Process.

Where prior approval is required to demonstrate exceptionality, all requests should be sent to Individual Funding Requests, 722 Prince of Wales Road, Sheffield, S9 4EU, or sent electronically to [sheccg.sybifr@nhs.net](mailto:sheccg.sybifr@nhs.net) (safehaven) or by safehaven fax to 0114 305 1370 adhering to confidentiality procedures. Request by letter or proforma will be accepted. Clinicians should include relevant information against exception criteria to enable decisions to be made on funding request.

SC 29.25 of the contract makes clear that failure by the commissioner to respond within the agreed timescale may be taken as approval to treat. The IFR policy allows the IFR team 13 days to process the requests through the panel and request further information from the GP where required.

The CCG reserves the right to audit providers to ensure that prior approval criteria are adhered to and will expect evidence from providers to that effect.

## 8. Exceptionality

The CCG commissions according to the policy criteria. Requests for individual funding can be made only where exceptional circumstances exist and can be made through NHS Doncaster's Individual Funding Request (IFR) procedure.

Responsibility for demonstrating exceptionality rests with the referring clinician (potentially supported by the patient).

In order to demonstrate exceptionality the patient:

- Must be *significantly different* to the population of interest (i.e. patients with pulmonary hypertension and/or the subpopulation)

AND

- Be more likely to benefit from this intervention than might be expected than other patients with the condition

The fact that the treatment might be efficacious for the patient is not, in itself, grounds for exceptionality.

If a patient's clinical condition matches the 'accepted' indications for a treatment or situation which falls outside the commissioning policy the patient is, by definition, not exceptional.

## **9. Service Developments**

The CCG will not introduce new drugs/technologies on an ad hoc basis through the mechanism of individual case funding. To do so risks inequity, since the treatment will not be offered openly and equally to all with equal need. There is also the risk that diversion of resources in this way will de-stabilise other areas of health care which have been identified as priorities by the CCG.

The CCG expects consideration of new drugs/technologies to take place within the established planning frameworks of the NHS. This will enable clear prioritisation against other calls for funding and the development of implementation plans which will allow access for all patients with equal need.

The CCG is required to achieve financial balance each year and therefore has a default policy of not funding a treatment where no specific policy exists to approve funding for the treatment. If the CCG has not previously been asked to fund an intervention that has the potential to affect a number of patients, the applications should be made by clinicians for the CCG to consider the intervention through its general commissioning policy and not by way of an IFR application.

Interventional Procedure Guidance issued by NICE will be deemed by the CCG as a Service Development and will not be routinely funded by the CCG unless agreed in advance.

## **10. Definitions**

### **Definition of Procedures of Limited Clinical Value**

Procedures of limited clinical value are those that deliver a relatively poor output/outcome to the population. This schedule sets out those procedures of limited clinical value that are not routinely commissioned or only commissioned when certain criteria are met.

### **Definition of Clinical Thresholds**

Clinical thresholds are a predetermined set of criteria that must be met before some procedures are considered. The threshold may be such that medication would deal with the problem. Surgery should be a last resort for a number of conditions and should not take place before considering and trying other non-surgical, reasonable options.

### **Definition of Commissioning**

Assessing local needs, agreeing priorities and strategies, and then buying services on behalf of our population from a range of providers whilst constantly responding and adapting to changing local circumstances.

### **Definition of Individual Funding Request**

An individual funding request is where prior approval for a patient's treatment is required due to that treatment or symptom criteria being outside of our approved commissioning policies and in such cases exceptionality will need to be proven.

### **Definition of Exceptionality**

In order to demonstrate exceptionality the patient

- Must be significantly different to the population of interest (i.e. patients with pulmonary hypertension and/or the subpopulation), and,
- Be more likely to benefit from this intervention than might be expected than other patients with the condition

For further information regarding Individual Funding Requests please see the following link:  
<http://www.doncasterccg.nhs.uk/about-us/public-information/policies-and-procedures/clinical-policies/>

## **11. Monitoring and Payment**

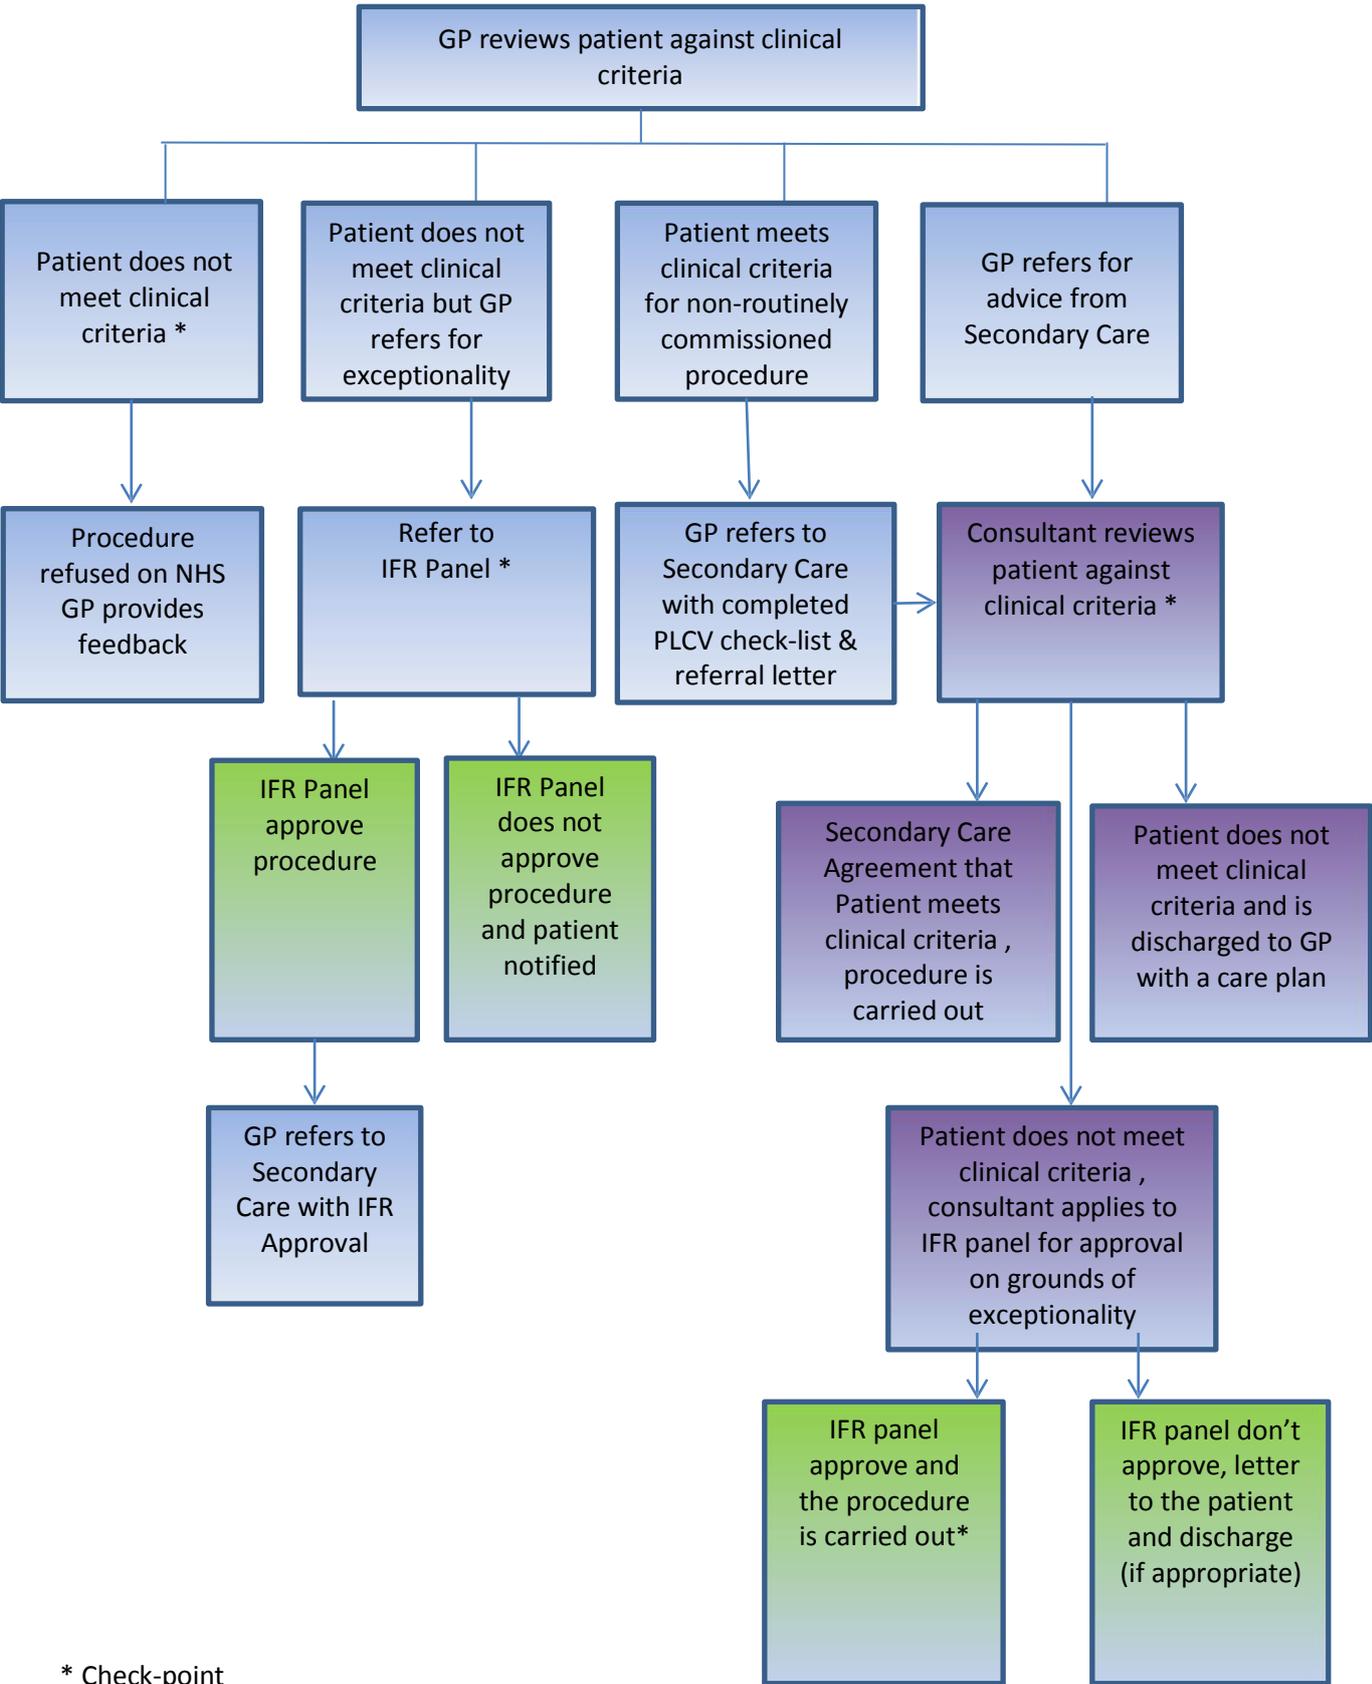

The CCG will audit adherence to the clinical thresholds policy. Where there is no evidence that the patient meets the clinical threshold, the CCG will not pay for the patient's treatment. The NHS Standard Contract Service Conditions 29.22 makes clear that the commissioner is under no obligation to pay for activity which has been undertaken by the provider in contravention of agreed prior approval schemes. 5

The CCG will monitor activity and finance levels on a monthly basis through the Contract Finance, Performance and Information Group. A baseline will be established and activity monitored against the following OPCS codes listed in the table below

## 12. Commissioner Exceptional Treatment Request/Appeal Contact Points

Address: 722 Prince of Wales Road, Sheffield

					<p>the following criteria have been met including patient record documentation of conservative treatment interventions:</p> <ul style="list-style-type: none"> <li>• Fixed flexion or extension deformity that cannot be corrected</li> <li>• No improvement after conservative treatment of splinting and non-steroidal anti-inflammatory drugs <b>and</b> steroid injection (max 2 injections with a 10 week interval between each injection)</li> </ul>		
Updated January 2017	Orthopaedics			Acupuncture for Low Back pain	In accordance with NICE NG59.	<a href="https://www.nice.org.uk/guidance/NG59/chapter/recommendations">https://www.nice.org.uk/guidance/NG59/chapter/recommendations</a>	

## **Appendix 4 Checklists for Treatments and Services (post February 2017)**

Benign Skin lesions

Cholecystectomy

Interventional treatment for Haemorrhoids

Hernia Repair (Inguinal, umbilical, para-umbilical, incisional)

Cataract Surgery

Hip/Knee Replacement for osteoarthritis

Carpal Tunnel Syndrome

Common Hand Conditions (Dupuytren's, Trigger Finger, Ganglion)

Acupuncture for Low Back pain and sciatica
